

Astrocyte Biology Postdoctoral Positions UCLA

We have openings for Postdoctoral Researchers to use imaging, RNA-Seq, and proteomic approaches to study astrocyte diversity and function across circuits of the mouse brain. Additional methods include molecular biology and electrophysiology. The applicants should have experience in one or more of the required methods, but full training will be available. The project is in the laboratory of Professor Baljit S. Khakh in the Department of Physiology at UCLA.

Further information about the research group and our published work is available from the laboratory web page

<http://www.physiology.ucla.edu/Labs/khakh/index.htm>

Interested candidates should submit a letter and a curriculum vitae to bkhakh@mednet.ucla.edu
